

Dragons Breath

Renewable Energy Consultancy Services

Dragons Breath has established itself in renewable energy development. Offering many bespoke services encompassing all aspects of solar powered energy concepts.

Off-Grid, Grid-Connection, UPS low voltage backup, battery powered solar projects, solution providers. Company founder Johnathan Rowles, has over the last 30 years has helped numerous customers with the many benefits coupled with the practical and technical experience in DC power systems. This has culminated a 'hands on' approach to system research and development design & evaluation, lending the company into developing many photovoltaic systems and projects during the last 30 years.

Having utilised many score years of mechanical and electrical bias in the UK, that has proven an asset when selecting components that match. Helping to devise methods of overcoming the many problems and issues which could arise to the uninitiated, who are often daunted by the projects they take on. Dragons Breath are able to deliver quality equipment parts. Using in depth knowledge, making long term selection when optimising system components.

Dragons Breath have an objective to ensure that, any services offered should meet with the scope and assessment of general characteristics that will provide the highest possible expectations to ensure requirements are delivered proportionally.

Dragons Breath has received and continues to receive many enquiries that the renewable industry places upon our technical approach to conveying knowledge.

It is therefore imperative that with the development of any new projects we offer a service tailored to suit the many different application.

We aim to identify projects using our knowledge with a best products approach that will be beneficial to specific applications, demonstrating which products will ideally perform their duties to maximise return on any investments.

Bringing a project from the initial thought through to fruition. We often use mathematical calculations to demonstrate the value, when purchasing high quality products.

Quality should never be compromised alongside less favourable products. Every energy production system should return long lasting quality.

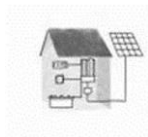

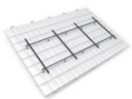

We offer bespoke services to our customers, tailored solutions designed to suit their applications.

Starting at £200 + vat. This would be refunded to the sum of 50% should the customer purchase the full specification of required materials through our company. This refund is offered in the form credit note against full bill of materials purchased.

Note! Quotations are based on information received.
